

MATH 2301 (Barsamian) Lecture #29 (Wed Nov 15) ①

Today: 5.1

Friday: 5.2

Mon: 5.3 Quiz Q8

Tues: Recitation

# Section 5.1 Areas + Distances

(2)

## Meeting Part I: Areas

Two kinds of area between function  $f(x)$  and  $x$  axis from  $x=a$  to  $x=b$ .

Unsigned Area (USA): All regions have positive area.  $USA = \textcircled{1} + \textcircled{2} + \textcircled{3}$

Signed Area (SA): regions below  $x$  axis get a minus sign

$$SA = \textcircled{1} - \textcircled{2} + \textcircled{3}$$

# The Area Problem

③

For a general curvy function  $f(x)$  whose graph is not made up of basic geometric shapes,

(1) What do we even mean by "Area"?

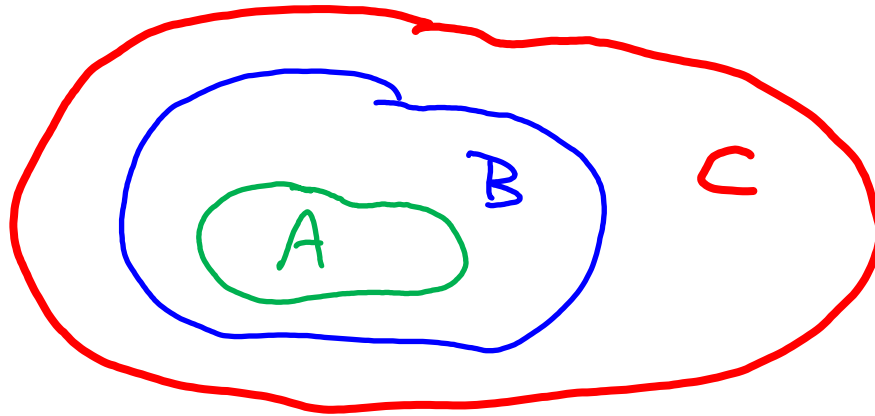

(2) How do we compute a value for the Area?

Try to answer question ② first (oddly)

We expect Area (whatever it means) to behave this way

If

$$\text{Region A} \subset \text{Region B} \subset \text{Region C}$$

then we expect that

$$\text{Area A} < \text{Area B} < \text{Area C}$$

5

Sometimes we can create a "Sandwich" of regions

Region A

Unknown area  
Region B

Region C

We expect

$$\text{Area A} < \text{Unknown Area B} < \text{Area C}$$

# Riemann Sums

(6)

## Definition of Left Sum

Symbol:  $L_n$

Spoken: Left Sum with  $n$  rectangles

Usage: There is some continuous function  $f(x)$  in the discussion and an interval  $[a, b]$

Meaning: the sum of the areas of  $n$  equal width "Left Rectangles" that are parked on interval  $[a, b]$

Rectangle's left corner is on graph of  $f(x)$

⑦

Similarly for Right Sum,  $R_n$

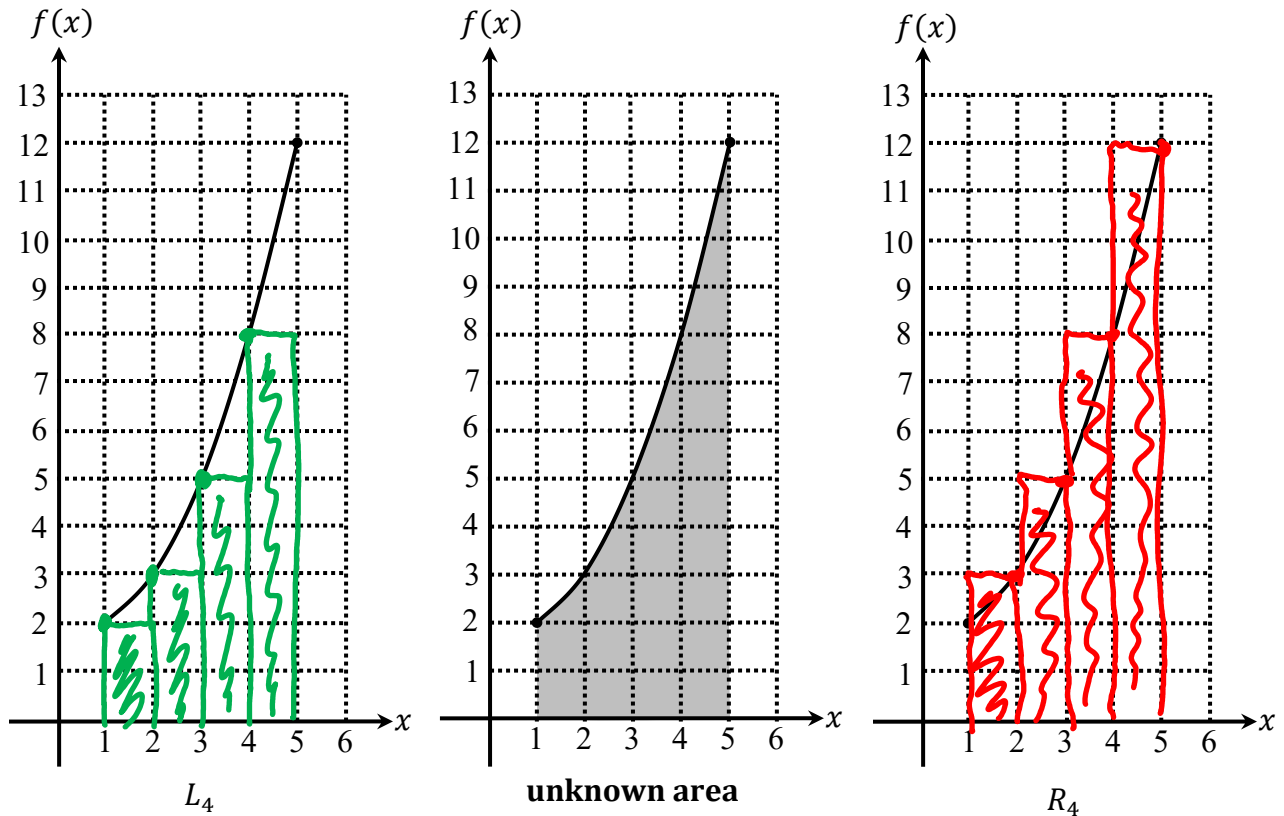

Uses  $n$  "Right Rectangles"

Right corner is  
on the graph  
of  $f(x)$

**Class Drill: Estimating the Area Under a Graph by Using Riemann Sums**

The goal is to estimate the shaded area in the middle figure. You will do this by finding the values of the Riemann sums  $L_4$  and  $R_4$ . This will give you lower and upper bounds for the shaded area.

(A) Draw in the rectangles for the left sum  $L_4$ .

(B) Find the value of  $L_4$ .  $L_4 = 2 \cdot 1 + 3 \cdot 1 + 5 \cdot 1 + 8 \cdot 1 = 18$

(C) Draw in the rectangles for the right sum  $R_4$ .

(D) Find the value of  $R_4$ .  $R_4 = 3 \cdot 1 + 5 \cdot 1 + 8 \cdot 1 + 12 \cdot 1 = 28$

(E) Use the values from questions (B) and (D) to build a true inequality

$$18 < \text{unknown area} < 28$$

9

### Class Drill: Computing Riemann Sums

The goal is to find approximations for the signed area between the graph of the function  $f(x) = \frac{1}{x}$  and the  $x$  axis on the interval  $[1,7]$  by computing Left and Right Riemann Sums with 3 rectangles. That is, find values for  $L_3$  and  $R_3$ . Show all details clearly. (Hand calculations! No calculators or cell phones!)

$L_3$  > unknown area >  $R_3$

$$\text{Rectangle width} = \Delta x = \frac{b-a}{3} = \frac{7-1}{3} = \frac{6}{3} = 2$$

Important  $x$  values

$$\begin{array}{cccc}
 & \Delta x = 2 & \Delta x = 2 & \Delta x = 2 \\
 & \text{---} & \text{---} & \text{---} \\
 & \bullet & | & | & \bullet \\
 X_0 = a = 1 & & X_1 = X_0 + \Delta x & & X_2 = X_1 + \Delta x & & X_3 = b = 7 \\
 & & = 1 + 2 & & = 3 + 2 & & \\
 & & = 3 & & = 5 & & 
 \end{array}$$

$$\begin{aligned}
 L_3 &= f(x_0) \cdot \Delta x + f(x_1) \Delta x + f(x_2) \Delta x \\
 &= \frac{1}{x_0} \cdot \Delta x + \frac{1}{x_1} \Delta x + \frac{1}{x_2} \Delta x
 \end{aligned}$$

$$= \left( \frac{1}{x_0} + \frac{1}{x_1} + \frac{1}{x_2} \right) \Delta X$$

(10)

$$= \left( \frac{1}{1} + \frac{1}{3} + \frac{1}{5} \right) \cdot 2$$

$$= \left( \frac{15}{15} + \frac{5}{15} + \frac{3}{15} \right) \cdot 2$$

$$= \frac{23}{15} \cdot 2$$

$$= \frac{46}{15}$$

$$R_3 = (f(x_1) + f(x_2) + f(x_3)) \cdot \Delta x$$

(11)

$$= \left( \frac{1}{3} + \frac{1}{5} + \frac{1}{7} \right) \cdot 2$$

$$= \left( \frac{35}{105} + \frac{21}{105} + \frac{15}{105} \right) \cdot 2$$

$$= \frac{71}{105} \cdot 2$$

$$= \frac{142}{105}$$

$$L_3 = \frac{46}{15} > \text{unknown area} > \frac{142}{105}$$

$$\text{roughly } 3 > \text{unknown area} > \text{roughly } \frac{3}{2}$$

end of Class Drill
